## PocketPC WiFi Monitor Manual

### Overview

PocketPC WiFi Monitor, is a small utility tool, that allows you to quickly scan for wireless networks around you, and display usefull information about them.

After you install and start WiFi Monitor, please select your settings:

- **Scan speed:** Move the slider to select between the minium (5 seconds) and maximum (140 seconds) time interval, at which scans are performed.
- **Hide secure:** It will hide the networks that are secure and require a WEP key to connect.
- **Hide peers:** It will hide peers (networks cards) that are detected.
- **Sound off:** Enable or disable sound alert, when a new network is found.

Press the "Start scan" button, to start scanning for networks. You can stop the scanner anytime, by pressing the "Stop scan" button.

If you want to change the scan speed, move the slider, and then press the "Start scan" button, to update the scan speed.

### Note for demo users:

- The demo will only display the first 3 networks found
- Sounds alert is disabled in the demo
- The demo will quit after 20 scans.
